

JOEY F. MIRAL

UI/UX Designer & Web Developer

Pasay City, Philippines | miraljoey291@gmail.com | (+63) 9478037720

[Portfolio](#) | [Behance](#) | [GitLab](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

IT graduate (Cum Laude, GWA 1.497) with hands-on experience designing and building user-facing digital products — from Figma UX case studies to a fully deployed React/Vite/Tailwind CSS portfolio site with a live serverless backend. Combines a genuine eye for interface design and usability with real full-stack development experience (Java/Spring Boot, REST APIs, relational databases), enabling close collaboration with engineering teams and end-to-end ownership of features from wireframe to production.

CORE COMPETENCIES

- UI/UX Design: Figma (wireframing, prototyping, user flows), usability principles, responsive design, design systems
- Frontend Development: React, Vite, Tailwind CSS, HTML/CSS, JavaScript, component-based architecture
- Backend & APIs: Java, Spring Boot, RESTful API design, Postman, Swagger UI, Redis caching
- Database & Data: MySQL, PostgreSQL, MSSQL, ER diagramming (Draw.io), schema design and normalization
- Tooling & Deployment: Git, Vercel, Docker, Linux, Resend (serverless email integration)

FEATURED PROJECTS

J. Portfolio — Personal Portfolio Website

- Problem: Needed a portfolio that demonstrated real design and engineering ability, rather than a templated builder site, to stand out in a competitive job search.
- Approach: Designed and built the full site from scratch (React, Vite, Tailwind CSS), iterating through multiple visual directions — neo-brutalist, glassmorphism, and a final custom teal theme — before landing on one that best reflected a cohesive personal brand; added scroll-based animations and a serverless contact form (Resend).
- Outcome: Shipped and deployed live on Vercel with a working backend, including a custom AI chat widget powered by the Anthropic API; actively used as the primary portfolio in ongoing job applications.

UX/UI Case Studies (Behance) — Figma

- Planti-Tao (Mobile Plant Care App) — Problem: First-time plant owners struggle to track individual care schedules and plant health. Approach: Mapped user flows from onboarding to daily care reminders, then designed wireframes and high-fidelity screens in Figma. Outcome: A complete, presentable UX case study covering the full design lifecycle end-to-end.
- Gym Client Management Page — Problem: Gym staff needed a clearer way to view and manage client information at a glance. Approach: Designed a dashboard UI prioritizing scannability and quick access to key client data. Outcome: A client-facing management interface concept ready to present to stakeholders.
- CM Shop (E-commerce UI) — Problem: Shoppers abandon carts when checkout flows feel cluttered or unclear. Approach: Designed browsing, cart, and checkout screens with a focus on visual hierarchy and minimizing steps to purchase. Outcome: A cohesive e-commerce UI concept demonstrating conversion-focused design thinking.

WORK EXPERIENCE

Java Development Engineer | ScoutStaff Inc.

October 2023 – April 2024 | Pasay City, Philippines

- Designed and developed RESTful APIs using Spring Boot, translating stakeholder requirements into backend logic and API response structures that directly shaped how data was surfaced to end users.
- Collaborated with stakeholders to clarify data and product requirements — a discovery and translation process closely mirroring UX requirement-gathering.

- Configured Redis caching layers to improve API response times, and containerized services using Docker within Agile/Scrum sprint cycles.
- Wrote and optimized SQL queries across MySQL and PostgreSQL to ensure accurate, reliable data for downstream interfaces.

Database Designer Intern (Data Team) | 4Gives Finance

March – June 2023 | Makati City, Philippines

- Designed a Sales Report Database from scratch for a fintech project, modeling data flows to directly support business analytics and reporting interfaces.
- Created entity-relationship (ER) diagrams in Draw.io to document structure and communicate design decisions clearly to the development team.
- Redesigning an existing schema, improving data integrity and query performance through proper normalization.

Computer Operator — Data & IT Operations | Metropolitan Bank and Trust Company (Metrobank)

July 2024 – June 2026 | Makati City, Philippines

- Validated hourly transaction data and monitored real-time batch jobs, ensuring accuracy and reliability of information consumed downstream.
- Investigated and resolved data pipeline failures under strict SLA windows, building strong attention to detail and structured problem-solving.
- Conducted performance testing (MBOA) on internal applications and reported latency trends to the development team — early exposure to app performance from a user-experience lens.

EDUCATION

Bachelor of Science in Information Technology — Cum Laude (GWA: 1.497)

Technological University of the Philippines, Manila | Graduated August 2023

- Relevant Coursework: UI/UX Design, Web & App Development, Database Management, Data Analytics, Software Engineering, ERP Systems
- Scholarships: Caritas YSLEP Scholar, Pasay City Travel Scholar (2019–2023)

CERTIFICATIONS & ACTIVE LEARNING

- TESDA Azure AI Fundamentals (AI-900 aligned) — in progress
- AI Engineering on Python — Udemy (in progress)
- SQL — structured self-study: aggregations, GROUP BY, joins, subqueries (SQLite)
- QUEST: Quality Evaluation and Assurance in Software Testing (2023)
- Google Grasshopper – Web Development (2021)
