PROFESSIONAL SUMMARY

Data-oriented IT professional with hands-on experience in SQL-based data operations, ETL pipeline validation, database design, and backend data modeling. Skilled at structuring and querying relational databases to support reporting and analytical needs, with a strong understanding of how data flows from source to insight. Background spans banking data operations at Metrobank, backend data systems at ScoutStaff Inc., and relational database design at 4Gives Finance. Currently building hands-on expertise in Tableau through Tableau Public and actively pursuing the Tableau Desktop Specialist certification. Holds a BS in Information Technology (Cum Laude, GWA: 1.497) from the Technological University of the Philippines.

CORE COMPETENCIES

Data Visualization & BI: Tableau Public (hands-on, actively building), Excel Dashboards, data reporting via SQL
Database & SQL: MSSQL, MySQL, PostgreSQL, SQL Developer — querying, joins, aggregations, ETL validation

Data Operations: Batch processing, ETL pipeline support, AML transaction monitoring, anomaly detection

Analytics Tools: Control-M Agent, FIS, SQL Developer, Draw.io (ER diagrams)

Other Technical: Java/Spring Boot, Docker, Git, Postman, Linux, Python (learning)

WORK EXPERIENCE

Metropolitan Bank and Trust Company (Metrobank)

Makati City, Philippines

Computer Operator — Data & IT Operations

July 2024 – June 2026

- Tracked and validated hourly transaction volumes using SQL Developer and MSSQL, writing ad-hoc queries to flag data anomalies and escalate discrepancies within defined SLA windows — directly supporting data accuracy across banking pipelines.
- Supported ETL (Extract, Transform, Load) operations by querying and validating data at various pipeline stages, ensuring completeness and integrity before and after batch processing runs.
- Monitored real-time batch jobs and end-of-day processing cycles using Control-M Agent, ensuring zero missed schedules across critical banking workflows.
- Conducted Anti-Money Laundering (AML) transaction monitoring by reviewing and analyzing flagged entries in the Base60 system and coordinating with compliance teams — demonstrating ability to interpret data in a regulated, high-stakes environment.
- Performed special error handling during batch processing failures — investigated job abends, identified root causes, and applied corrective reruns to restore pipeline continuity.
- Executed MBOA (MB App Response Time) performance testing, measured application responsiveness, and reported latency trends to the development team.

Tools & Systems: SQL Developer, MSSQL, Linux, FIS, Control-M Agent, MBOA Testing, ITSP

ScoutStaff Inc.

Pasay City, Philippines

Java Development Engineer

October 2023 – April 2024

- Designed and implemented data models through Spring Boot services, structuring backend data layers to accurately represent business entities and support downstream reporting and querying needs.
- Wrote, optimized, and modified SQL queries across MySQL and PostgreSQL databases based on evolving data requirements — including filtering, aggregations, joins, and debugging data mismatches to ensure output accuracy.
- Collaborated with stakeholders to clarify data needs and translated those requirements into backend query logic and API response structures that surfaced the right data for reporting workflows.
- Designed and developed RESTful APIs using Spring Boot, fulfilling business requirements and modifying service contracts based on stakeholder specifications.

- Configured Redis caching layers to improve API response times and reduce redundant database calls on frequently accessed endpoints.
- Containerized microservices using Docker and maintained source code versioning via Git across Agile/Scrum sprint cycles.

Tools & Technologies: MySQL, PostgreSQL, Spring Boot, Java SE, Postman, Swagger UI, Redis, Docker, Git

4Gives Finance – Internship Program

Makati City, Philippines

Database Designer Intern (Data Team)

March – June 2023

- Designed the Sales Report Database from scratch for an ongoing fintech project — modeling data flows for transactions, customer records, and reporting aggregations to directly support business analytics needs.
- Redesigned the existing database schema by restructuring tables, defining proper relationships (primary/foreign keys), and optimizing normalization to improve data integrity and query performance.
- Created comprehensive entity-relationship (ER) diagrams using Draw.io to document database structures, enabling clear communication with the development team.
- Migrated the company's project environment to local desktop infrastructure including full database migration to PostgreSQL, with end-to-end testing for integrity validation.

Tools: PostgreSQL, Draw.io

EDUCATION

Technological University of the Philippines

Manila, Philippines

Bachelor of Science in Information Technology — Cum Laude (GWA: 1.497) Graduated August 2023

- Relevant Coursework: Information Management, Database Management, Data Analytics, ERP Systems, Software Engineering, UI/UX Design, Web & App Development.
- Scholarships: Caritas YSLEP Scholar | Pasay City Travel Scholar (2019–2023)

CERTIFICATIONS & ACTIVE LEARNING

- Tableau Desktop Specialist Certification — currently in progress (Tableau Public hands-on practice)
- TESDA Azure AI Fundamentals (AI-900 aligned) — in progress
- AI Engineering on Python — Udemy (in progress)
- SQL — structured self-study: aggregations, GROUP BY, joins, subqueries (SQLite)
- Google Grasshopper – Web Development (2021)
- QUEST: Quality Evaluation and Assurance in Software Testing (2023)
